Skype for Business

Skype for Business is a corporate online platform for messaging and remote collaboration, integrating messaging, voice and video calls, conferencing, and file exchange functionalities as a component of one safe solution. A business-focused evolution of the traditional Skype application, this infrastructure provided organizations with tools for effective communication inside and outside the company aligned with corporate policies on security, management, and integration of IT systems.

Microsoft Access

Microsoft Access is a comprehensive database management solution for creating, storing, and analyzing organized information. Access is ideal for building small-scale local databases as well as advanced business systems – for recording

customer information, stock levels, order history, or financial transactions. Integration with other Microsoft products, utilizing Excel, SharePoint, and Power BI, broadens the horizons of data processing and visualization. Owing to the balance of power and cost, users and organizations looking for dependable tools will find Microsoft Access to be the perfect fit.

Power BI

From Microsoft, Power BI is a powerful platform for visualizing and analyzing business data intended to translate unconnected data into cohesive, interactive reports and dashboards. It is oriented towards analysts and data specialists, aimed at casual users needing accessible analysis tools without specialized technical knowledge. Thanks to the Power BI Service cloud platform, reports are easily published, updated and accessible from any part of the world on multiple devices.
